Help Earth Sanctuary plant long-living conifers in this Red Alder forest.

The red alder forest is mature, nearing the end of its life span (about 50-80 years). Now is the time to plant long-living conifers, the foundation of a future old-growth forest.

- Everyone who donates $50 or more to plant trees in the Red Alder forest will have their name – or the name of a person they would like to honor – added to a sign by the forest.
- Your donation will enable us to fill this Red Alder forest with a wide variety of trees, including Western Red Cedar, Western Hemlock, Douglas Fir, Sitka Spruce, Shore Pine, Redwood, Sequoia, and more.
- Trees combat climate change and create cleaner, healthier air.
- Healthy forests create and sustain wildlife habitats and diverse balanced ecosystems.
